RoHS Stakeholder Consultation

To whom it may concern,

This is our contribution to 1st Stakeholder Consultation – Questionnaires for beryllium and its compounds:

Coherent LaserSystems GmbH Co. KG does not use any pure beryllium metal or beryllium oxide.

Coherent only uses commercially available EMC gaskets made from copper-beryllium alloys. The amount of copper-beryllium EMC gaskets is about 25 kg per year.

If required we can probably replace the actual used copper-beryllium EMC gaskets by stainless steel gaskets after redesign actions of our products. We expect that we can achieve comparable performance with the stainless steel gaskets.

Best regards

Coherent LaserSystems GmbH & Co. KG
