

The Oxygenated Solvents Producers Association (OSPA) would like to submit the following comments to the stakeholder consultation launched as part of the “Study for the review of the list of restricted substances and to assess a new exemption request under Directive 2011/65/EU (RoHS 2) – Pack 15”

We like to emphasize that following solvents are mainly used in the production of electronic equipment as process solvents and are removed by evaporation in their respective applications for instance in binders or as cleaning agent for circuit boards, but they are not part of electronic equipment anymore.

Therefore, they do not need to figure on a RoHS list.
