Brussels, 13 February 2020

Dear Mr Baron,

RE: Agreement with and support of responses submitted by i2a to the 2nd Stakeholder Consultation on the RoHS Annex II Dossier for Diantimony trioxide (flame retardant) on 30 January 2020

With this letter, APPLiA, represented by Paolo Falcioni, wishes to request Öko-Institut and Fraunhofer to take account of the comments provided by the International Antimony Association (i2a) on the RoHS Annex II Dossier for Diantimony trioxide (flame retardant); Restriction proposal for substances in electrical and electronic equipment under RoHS; Report No. 1, Version 2 (dated 04/12/2019).

The information provided by i2a covers our use of ATO and highlights the key reasons why ATO should not be restricted under RoHS now nor in the short- to medium-term future.

Regards,
