Supports the request for renewal to the Annex IV to Directive 2011/65/EU

For whom it may concern:

~~XXXXXXXXXX~~ supports the request for renewal for Annex IV Ex. No. 41. of Directive 2011/65/EU in response to Consultation Questionnaire question 5e.

As plenty of literature, recommendations and guidelines from major scientific societies demonstrates, the availability of parameters like pH, pO₂, pCO₂, lactate and CO-oximetry, currently provided to our institution through blood gas analyzers, is critical for the management of patients in urgent/critical situations. Our patient population would be adversely impacted if these parameters couldn't be analyzed in our institution through accurate, fast, simple POC instruments such as the blood gas analyzers.

Thank you for considering our feedback in support of the renewal request for Annex IV Ex. No. 41.

Best regards,
