Subject

Comparison of a specific UV-LED (395nm) from MSTECH with conventional UV technology ELPEGUARD® UV Twin-Cure® DSL 1600 E-FLZ/75

Test specimen

ELPEGUARD® UV Twin-Cure® DSL 1600 E-FLZ/75 (UV) ELPEGUARD® UV Twin-Cure® DSL 1600 E-FLZ/75 (UV-LED)

Measuring Equipment & Standards

A) Dielectric strength

B) Moisture insulation resistance

C) Surface isolation resistance under condensation based on ISO 6270-2

D) Thermal shock resistance

IPC-TM-650, 2.5,6,1 85/85 test (3d, 85°C/85% r.h)

(BIAS 12V, 40°C, 100 % r.h.) (acc. to IPC-CC-830C 3.7.2; -40 to +125°C)

Sample Treatment

Coating of test-specific specimens and curing trough

- UV-LED at 395 nm (SnapCure UV-LED provided by MSTECH)
 - o 4400 mJ; 20sec.
- UV (Hg-lamp; 120W)
 - o 3000 mJ

Procedure & Results

A) Dielectric strength

DSL 1600 E- FLZ/75 (UV) DSL 1600 E- FLZ/75 (UV-LED)

Technical datasheet

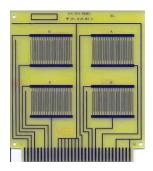

69 kV/mm 71 kV/mm ≥ 60 kV/mm

Result: no significant deviation.

B) Moisture insulation resistance

Testboard

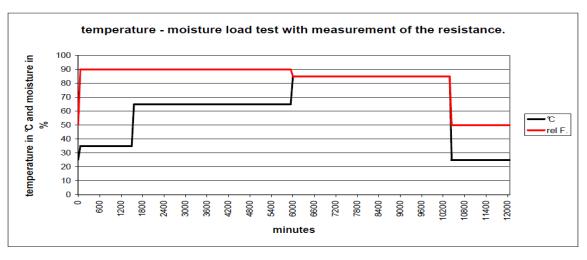

Lacquer layer thickness: approx. 200 µm cured

Curing: according to the respective technical data sheet

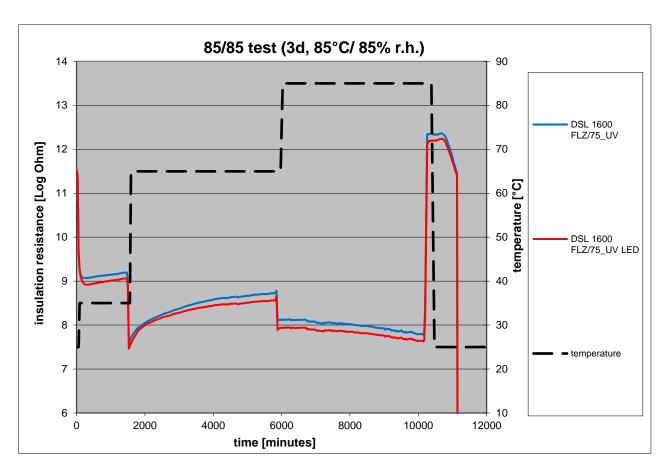

Test conditions: gradual increase of temperature in combination with moisture,

Bias 50 V; measuring voltage 100 V

Flow chart 85/85 Test

Blue: DSL 1600 E- FLZ/75 (UV) Red: DSL 1600 E- FLZ/75 (UV-LED)

Result: no significant deviation.

C) Surface isolation resistance under condensation

Testboard

Lacquer layer thickness:

Curing:

Test conditions:

approx. 200 µm cured

according to the respective technical data sheet

96 hours, 40°C condensation; Bias 12 V;

measuring voltage 100 V

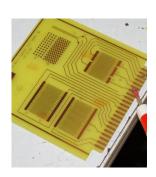

DSL 1600 E- FLZ/75 (UV) 4,0 x 10 8 Ohm DSL 1600 E- FLZ/75 (UV-LED) 4,5 x 10 8 Ohm Technical datasheet \geq 2,0 x 10 8 Ohm

Result: no significant deviation.

D) Thermal shock resistance

Testboard

Lacquer layer thickness: ≤ 130µm

Curing: according to the respective technical data sheet
Test conditions: -40 °C to +125 °C, 100 cycles, 15 minutes dwell time;

change < 10 seconds

DSL 1600 E-FLZ/75 (UV) fulfilled DSL 1600 E-FLZ/75 (UV-LED) fulfilled

Conclusion and interpretation

Based on the tests carried out, no significant difference were observed in the conformal coating ELPEGUARD® UV Twin-Cure® DSL 1600 E-FLZ/ 75 when a specific UV-LED technology was used instead of conventional UV curing.

The applied tests comply with state-of-the-art methods and precision. The specified results in no way represent a legal warranty of certain product properties or the suitability of the products for a specific purpose. The evaluated specimen does not offer any direct conclusion with respect to the entire test entity.
