Michael Hall, COLD CATHODE LIGHTING ASSOCIATION

Contents:

The UK CCLA supports the principal set out in Exemption 8 under RoHS for cold cathode lighting in architectural and general lighting applications for an exemption for this type and application of cold cathode lamps. However, we do disagree in the detail of the quantities involved and will provide full support to the proposed meeting to achieve a consensus solution.

(The consultants would like to remark that once further supporting information is submitted, it shall be decided in close coordination with the EU Commission if a meeting is necessary for further clarification.)
